These countries demonstrate that the world as a whole can achieve a 40-50% share of wind power in total electricity generation, as outlined by the WWEA in a long-term scenario.

Thus, the goals of this study were to assess the annual cycle and intra-annual variability of wind power around the world. A comprehensive dataset of more than 7000 globally

Our data is checked and revised over a rolling period of six months. We offer one-, two- or three-year update packages on an annual, bi-annual, quarterly or monthly basis. The Wind Power can also

Official statistics by year of wind power generation (TWh). The values are presented in tables and charts with calculations of changes and shares, and with extensive analytical functionality.

This dataset contains yearly electricity generation, capacity, emissions, import and demand data for over 200 geographies. You can find more about Ember's methodology in this

The Distributed Wind Market Report: 2024 Edition provides market statistics and analysis along with insights into market trends and characteristics regarding distributed wind energy from 2003 through

In Q4 2023, wind power exceeded coal in European electricity generation for the first time, generating 193 TWh compared to coal's 184 TWh. Despite wind installation challenges, wind generation rose by

Wind Turbine Orders Monitoring Q3 2024 Reports September 2024 Latest wind energy data for Europe: Autumn 2024 Reports August 2024 Offshore wind energy 2024 mid-year statistics

In 2024, the total wind power capacity installed worldwide surpassed 1.1 terawatts, growing by more than 100 gigawatts in comparison to the previous year. China is the leading country

Wind power generation distribution throughout the year

The Global Wind Atlas is a free, web-based application developed to help policymakers, planners, and investors identify high-wind areas for wind power generation virtually anywhere in the world, and then
